

Launching an MVP

Presented by Nursultan Askarbekuly

Arrive at a lean MVP

- Very fast to build
- Very limited functionality
- Appeal to a small set of users
- Base to iterate from

Earliest
Testable
Product

Earliest
Usable
Product

Earliest
Lovable
Product

If you are not embarrassed of your MVP,
you launched too late

"Where does it hurt?"

Headache

Stomach
ache

**THE DOMAIN FOR
THAT SIDE PROJECT
YOU NEVER LAUNCHED
IS UP FOR RENEWAL**

How to iterate quickly

- Time box your spec
- Write your spec
- Cut your spec
- Focus on doing one thing well.
- Don't fall in love with your MVP!

Have you launched?

Hypothesis Testing

Presented by Nursultan Askarbekuly

We expect
the product
to be used
in a certain way

Dev watching users use
the product:

<https://twitter.com/sanjazakovska/status/1352557733787152389>

What does hypothesis mean?

A hypothesis is an assumption, an idea that is proposed for the sake of argument so that it can be tested to see if it might be true.

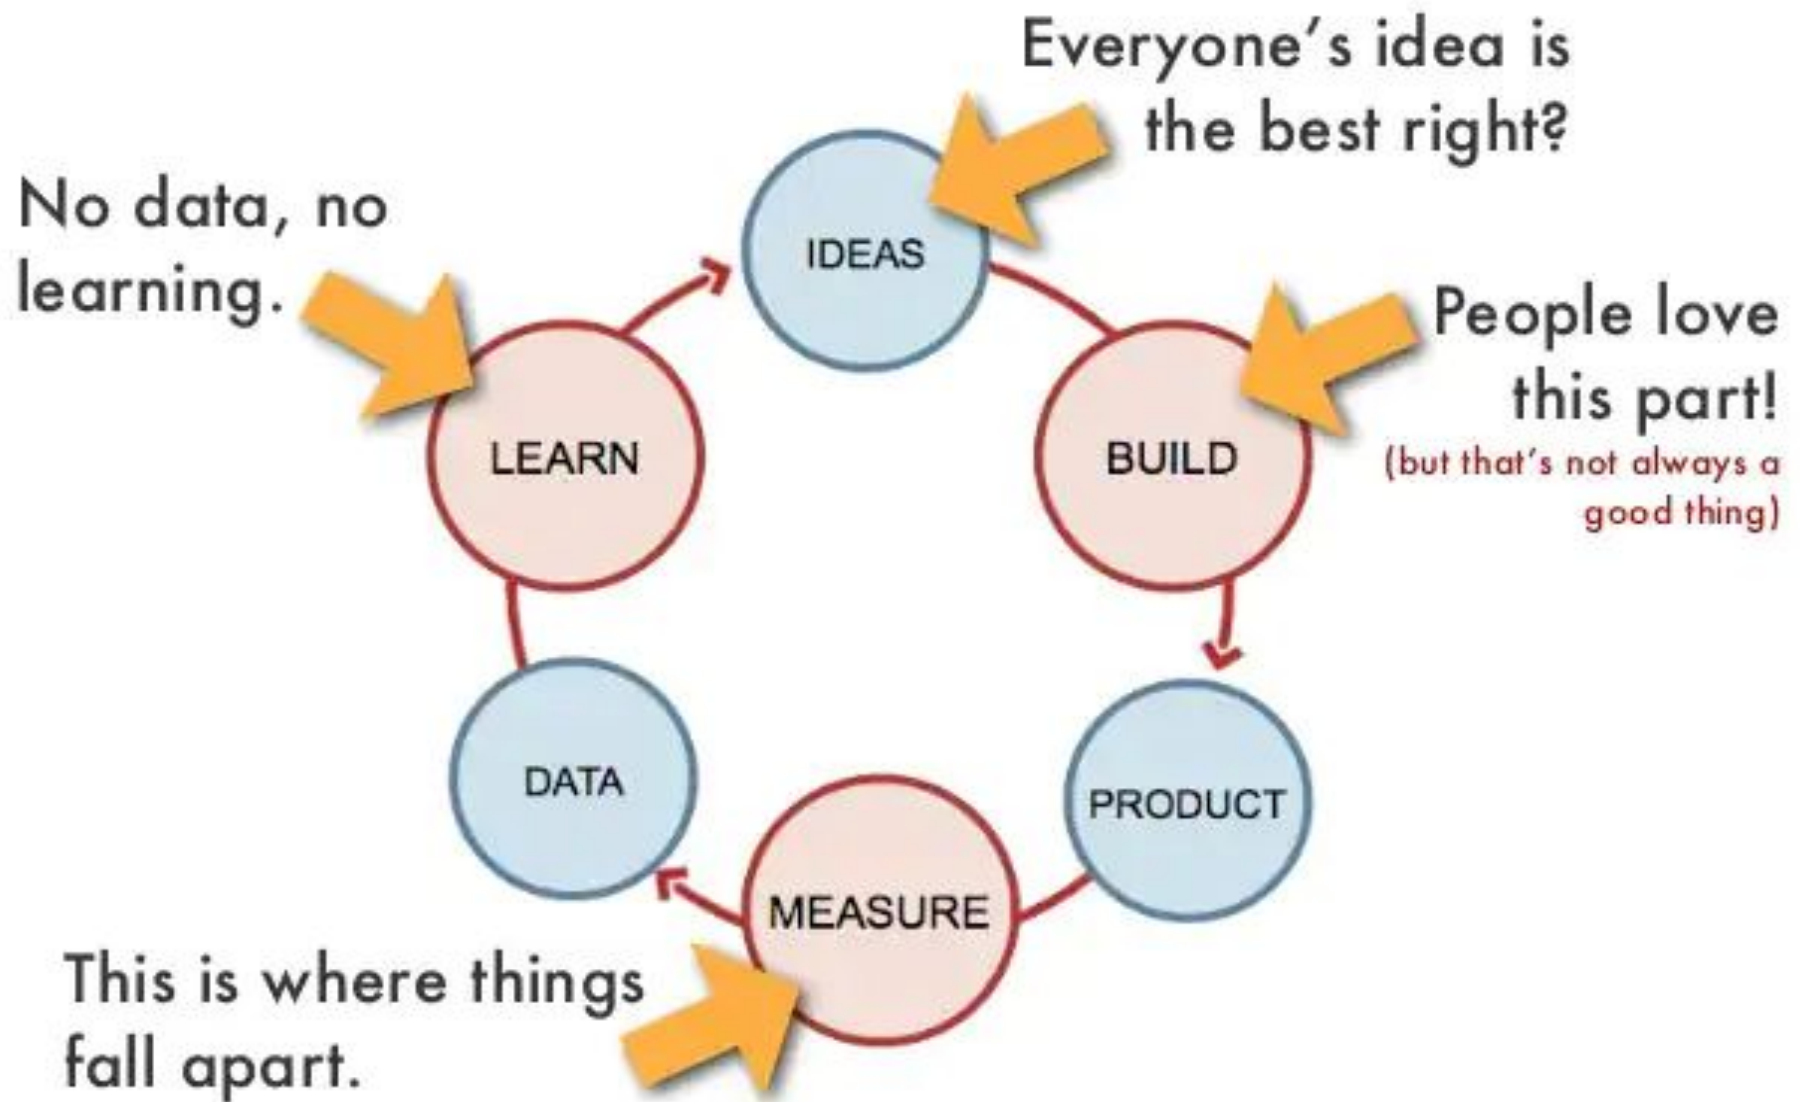

In the scientific method, the hypothesis is constructed before any applicable research has been done, apart from a basic background review.

(Merriam-Webster)

Design decisions are **opinions**
about what will work.

Design should lead to
experiments & observation.

Finalize based on **learning.**

Common hypotheses to check

Clarity hypothesis

Value hypothesis

Growth hypothesis

1. Is my product easy to understand
2. Is it easy to get started with my product
3. Are people coming back to my product
4. Are they telling other about it?

Important questions

1. How can people discover my product
- 2. Is my product easy to understand**
- 3. Is it easy to get started with my product**
4. Are people coming back to my product
5. Are they telling other about it

Easy to understand?

“The enemy is back button”

Paul Graham

Explaining the product to get the install/buy

Clear value proposition

- Descriptive names
- Good copywriting and visuals

Strong call to action

Person who's a
potential customer

Your product

Awesome person
who can do rad shit!

User-behavior metrics just like the pros.

mixpanel takes information specific to your application and turns it into valuable information to help your business grow.

What's the best button color for more signups?

Your growth

sign up

Small startup?

We built this for you. Let us help you figure out how to grow faster, retain more users, and figure out what makes your users happy.

From the color of a button to the average amount of times a user visits their profile, we can track it all.

Did we mention small enough startups get this for **free**?

Big company?

Employees, servers, and time are likely large expenses so why not let us give you more for a fraction of the cost?

Our service was designed to be flexible from the bottom up, automated to provide instant results, and easy to learn for your whole team.

We offer opensource software to help integrate and get up and running as fast as possible. Try us out before committing to anything, we think you will end up staying.

Application developer?

We know exactly where you're coming from. Infact we built applications too.

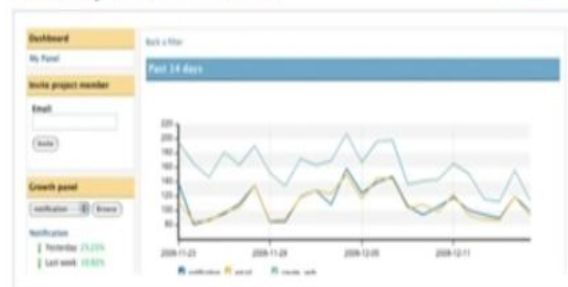

Whether your developing for Facebook, MySpace, or hi5 we can give you metrics analysis you wouldn't believe.

Find out how many notifications, emails, invites each user is sending out. Find out what parts of your application users are engaged in. Find out your viral growth trend.

Slide, RockYou, Zynga, and other big name companies in your space all virally tune their applications with internal metrics software. Compete with the big boys faster and cheaper while you focus on making users happy.

Metrics you will drool over

demo

Extremely detailed user behavior metrics.

Find out why you're not growing now to beat your competition.

Increase conversions today, massive growth tomorrow.

Give users what they want, find out what they like today.

General principles of graphic design

Visual hierarchy

Guide the eye to the **most important elements** of the screen.

1. Scale
2. Grouping
3. Color and contrast
4. Animation

YOU

At some point you may come back to read this line or maybe not.

WILL READ THIS FIRST.

And then you will read this line next.

You will go back to read this body copy if you want to know more. It takes the most effort to read because it has a lot of text in a small font in a light weight with tight line spacing. Many people will skip paragraphs like this unless if they aren't engaged right away. This is why it's important to draw attention to your message using visual hierarchy.

**You'll probably
read this before
the paragraph.**

Color, contrast, font

Recommendations on Font

Mobile

H1 font size: 38px+

H2 font size: 36px

H3 font size: 23px

Body text font size: -16px

Input font size: ~16px at least

Secondary text font size
(captions, labels etc): -14px

Desktop

H1 font size: 42px+

H2 font size: 38px

H3 font size: 25px Subhead
text font size: 22px

Body text font size: -18px

Nav link font size: -16px

Input font size: ~18px at least

Secondary text font size
(captions, labels etc); -16px

Copywriting

The main characteristics of a good text is that it facilitates for the reader to understand what is being said.

A good text facilitates for the reader.

A good text helps the reader.

Simplify the task of making
an informed choice.

The “Aha” or “Magic” moment

It is when user realizes /
experiences the core value
your product delivers.

Ideally, we want to see
excitement.

**Simplify/shorten the path
to this moment.**

3. Are people coming back to my product?

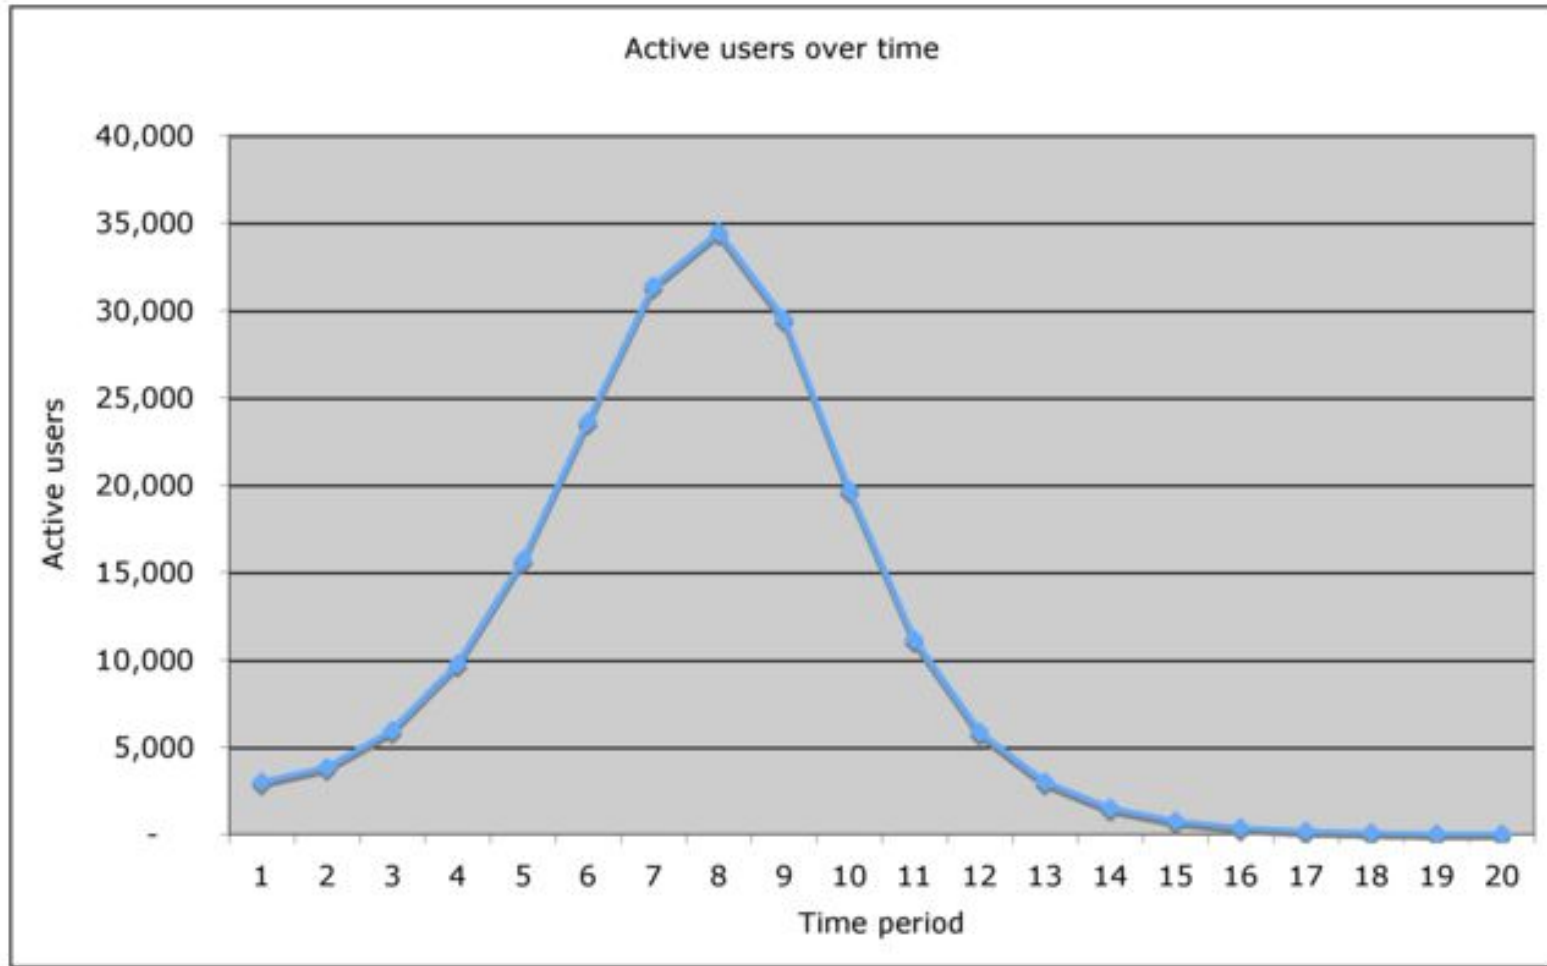

Poor retention is like a leaking bucket

Retention is important at keeping your product alive.
This metric is often ignored at the early stages.

Eventually, most products run out of new users.

Retention is a direct testimony to the value of your product.

The shark fin effect

The Drop-In Audio App Clubhouse Is Dying. It Was Fun While It Lasted

WhatsApp Messenger
WhatsApp Inc.

Ways to measure people coming back:

1. New users who came back 1 week + 30 days later to do a valuable thing again.
2. Number of people who use the product every day (DAU instead of MAU)
3. B2B: Revenue churn - monthly \$ lost in a given month

Once you know why you're not growing, then you should be able to **take action** on a lever & fix it.

For how long do we need
to retain the users?

Hypothesis	Web Funnel	Mobile Funnel
Easy to understand	# visited landing page	# visited app page
	# who then sign up	# who then install
Easy to get started	# who do the thing the product was made for	
People come back	# who come back to do that valuable thing again	
Telling others	# who want other people who share, word-of-mouth, refer	

What is better
than interviews?

Give your customers
something to play with;
Observe them.

Offline: unmoderated usability testing

- Goal: find out whether the product and its value propositions are clear to the user.
- Give them the product, ask them to figure it out.
- Mostly observe, don't pitch or defend.
- Some things you can fix on the go (usability, texts, positioning of UI elements).

Online: Moderated testing

Traditional usability tests are tasks you want your users to complete, while observing them.

Some tools allow you to observe user interactions with your product.

You give them tasks, and ask questions in between.

Example: <https://t.maze.co/52791794?guerilla=true>

Take notes

What was good

What was bad

Observing
users is the
fuel for
creativity!

Aim to benefit your user
